Industry Experience

- Dec. 2016 – **Software Engineer**, *Ads Quality Team, Google*, Mountain View, CA, USA.
Present Working on native ads format, report, with the purpose of improving the native ads quality and providing better native ads.
- Summer of **Intern**, *DoubleClick Search Reporting Team, Google*, Kirkland, WA, USA.
2015 Leveraged some data mining and statistics techniques to conduct change impact analysis, with the purpose to identify the correlation between advertising changes and performance metrics. Constructed a flume pipeline for change impact analysis over large scale data.
- Summer of **Intern**, *VideoAds Format Team, Google*, Mountain View, CA, USA.
2014 Built a tool to integrate multi-sources Ads time series data on YouTube video. Developed an integrated interface to facilitate the users for Ads time series data querying, analysis and visualization. Explored the correlation between time series to identify the factors in Ads format which contributes to skipping rate of Ads.
- Summer of **Intern**, *IBM T.J Watson Research Center*, New York, NY, USA.
2013 Facilitated problem diagnosis, determination and auto-resolution in a complex IT environment by designing and implementing a hierarchical multi-label classifier to analyze the incident tickets data of IBM Tivoli Monitoring System.

2009.7.1-2012.1.1 **Senior Data Engineer**, *Data Warehouse Department*, **Alibaba Group**, Hangzhou, China.

- Designed and implemented the meta-data extraction and association rule mining algorithms for the *Metadata Mining System*, a system that leverages data mining techniques to discover the latent relationship of 10000+ database tables from the heterogeneous sources such as DB2, Oracle, Greenplum, etc.
- Designed and implemented the scheduling algorithm for the internal data analysis job scheduling system. The implemented algorithm is able to schedule 10000+ ETL jobs per day on top of a heterogeneous architecture consisting of DB2, RAC, Greenplum, Hadoop/Hive, etc.
- Designed and implemented a distributed system called *Data Highway* to facilitate the high-speed data transmission between the heterogeneous data sources including DB2, HDFS, SQLServer, MySQL, Greenplum, RAC.
- Designed and implemented the *Automatic Deployment System* that is able to automatically deploy hundreds of projects per day.

2007.8-2008.3 **Software Engineer Intern**, *MSGUI Group*, **Alcatel-Lucent**, Chengdu, China.

- Designed the conceptual, logical, and physical data model and implemented the data access interface for a network management system called MAPIM.
- Implemented the configuration module for a user graphic rendering service called GUI Server and the communication module between the GUI Server and the MAPIM.

Academic Experience

2012.1-Present **Research Assistant**, *Knowledge Discovery Research Group*, FIU, USA.

- Designed and implemented a Fast,Integrated,User-friendly system named FIU-Miner in support of running a number of data analysis tasks in distributed environment. FIU-Miner, a linearly extensible system, provides a user-friendly workflow to schedule data analysis tasks in full use of the available resources of distributed environment.[**online demo**]
- Leded the design and implementation of manufacturing data analysis platform. This platform provides an integrated suit of solutions to analyze manufacturing data, especially the product data of Plasma Display Panel. The platform shows the entire solution of the data analysis from the initial data exploration to the final knowledge extraction.
[**online demo**]
- Worked on the Business Continuity Information Network (abbr., BCIN) project, providing a web-based service where local businesses, county emergency management, and organizations that assist businesses can gather to share critical information and support continuity efforts before, during and after a disaster. My work mainly focused on applying data mining techniques to address the critical process optimization in disaster management.
